

STELLARIS CASINO · SURVEILLANCE & PIT

A.S.S.E.T.

Aruba Surveillance Skill Enhancement & Training

The complete, illustrated guide to the drill platform — for agents and pit managers who run the drills, and for the supervisors, directors, and casino managers who have to answer for the numbers. Every screen shown here is the live application.

VERSION

1.0

ISSUED

July 2026

AUDIENCE

**Agents · Pit Managers · Supervisors
· Directors · Casino Manager**

ACCESS

assetdrills.com

Internal training document — Surveillance & Pit departments,
Aruba Marriott Resort & Stellaris Casino.

Illustrated with live screenshots
Demonstration data throughout

— How to use this manual

Every rule, threshold, and formula in these pages was taken from the code that actually runs and the database it runs against — not from a specification. Where a number could be read two ways, this manual says which one the application means.

How it is organised

PART	WHO IT IS FOR	WHAT IT COVERS
I — Everyone	All users	What the platform is, who is in it, how to sign in, and the first-login tour.
II — The drill portal	Agents · Pit Managers	Every screen you use on shift, plus the rules that decide what a session is worth.
III — Management	Supervisors · Shift Managers · Heads	Every management screen with every number defined, the head-only tools, the routines that turn them into action, and the exports.
IV — Reference	Management	The access matrix, one table of metric definitions, and how the platform protects its data.
V — Support	All users	FAQ, documented behaviours that catch people out, and a one-page quick reference card.

Parts I and II are meant to be read once, start to finish. Part III is deliberately precise — these numbers end up in compliance conversations — and Parts IV and V are for looking things up.

The boxes used throughout

TIP
Practical advice — how to get more out of a screen.

NOTE
Context or behaviour worth knowing, but not urgent.

IMPORTANT
Rules, limits, and things that will bite you if ignored.

READ BEFORE ACTING
Irreversible actions and the consequences that follow them.

HOW IT IS CALCULATED

Dark boxes like this one give the exact rule the application applies — the arithmetic, the time window, and who is counted. When someone challenges a number in a meeting, this is the answer.

IMPORTANT — SCREENSHOTS USE DEMONSTRATION DATA

Every screen in this manual was captured from the live application, but the people are fictional (names such as “Sam Trainee”, IDs such as `Z-01`) and the session history is seeded test data. Your screens will show your real team, and totals such as “9 agents” or “451 questions” will differ. The *layout*, controls, and rules are exactly what you will see.

Contents

Part I Everyone

1 Welcome to A.S.S.E.T.

What the platform is for · who uses it · roles · the department wall

2 Signing in

Employee ID login · lockout · password rules · timeouts

3 Your first login

The five-step guided tour

Part II The drill portal

4 Using the drill portal

Dashboard · drills · results · practice · trainers · resources · history · Pit Operations

5 Scoring & certification

Scoring formula · cooldown · recertification · adaptive difficulty · how questions are chosen

Part III Management

6 The management portal

Team Dashboard · Agent Detail · Completion · Weak Areas · Question Stats · Question Editor · Audit Log · Notifications

7 Department head tools

Scorecard · Audit Digest · Remediation · User Management

8 Management playbooks

Daily · weekly · month-end close-out · onboarding · offboarding · coaching

9 Exports & reporting

Which screen exports what, column by column

Part IV Reference

10 Roles & access

The capability matrix

11 Metric definitions

Every number, its formula, and its window

12 Security, privacy & data

What is stored, who sees it, how long it is kept

Part V Support

13 FAQ

For drill-takers, and 24 questions management actually asks

14 Known behaviours & limits

Documented quirks and what is not built yet

15 Quick reference card

Every number on one page

Everyone

What the platform is, who is in it, and how to get in. Four pages that every user — agent, pit manager, supervisor, or head — should read once.

1 Welcome to A.S.S.E.T.

A.S.S.E.T. — Aruba Surveillance Skill Enhancement & Training — is the department's web-based drill platform. It keeps payout math, game-protection knowledge, and floor procedures sharp through short scored drills, and gives supervisors and directors an evidenced view of team readiness.

Run drills
Ten-question scored sessions drawn from the live game and procedure pools, capped at ten minutes.

Practice freely
Unlimited, unscored practice with instant feedback, plus dedicated skill trainers.

Prove readiness
Scores, accuracy, weak areas, monthly certification, and exportable compliance records.

1.1 Who uses it

The platform serves two departments that never see each other's people or results — the **department wall**. Everyone signs in the same way; what appears afterwards depends entirely on the role attached to the account.

ROLE	DEPT.	PORTAL	WHAT THEY DO
Agent	Surveillance	Drill portal	Runs drills, practice, and trainers; tracks own progress and certification.
Pit Manager	Pit	Drill portal	Identical drills, scoring, and rules; sidebar is labelled "Pit Operations".
Supervisor	Surveillance	Management	Team performance and reports; creates and edits questions.
Shift Manager	Pit	Management	The Pit equivalent of Supervisor — same pages, Pit staff only.
Director head	Surveillance	Management + Admin	Everything a supervisor sees, plus Scorecard, Audit Digest, Remediation, and User Management.
Casino Manager head	Pit	Management + Admin	The same head tools, scoped to Pit staff.

NOTE — WHO IS ON THE SYSTEM TODAY

The live roster is **10 agents** and **10 pit managers** (the drill-takers), one Supervisor and one Director on the Surveillance side, and one Casino Manager on the Pit side. No Shift Manager account exists yet — the role is built and ready if the Pit side wants a second manager without account powers.

1.2 The department wall

Surveillance staff and Pit staff never appear in each other's dashboards, leaderboards, reports, audit records, or exports. This is enforced on the server — not merely hidden in the interface — so it holds regardless of how a page is reached.

HOW THE WALL WORKS

Department is derived from the role, not stored separately. **Surveillance** = `agent`, `supervisor`, `director`. **Pit** = `pit_manager`, `shift_manager`, `casino_manager`. Every management query and reporting function re-derives the caller's department from their signed-in identity and filters to it. **Shared across the wall:** the question pool, the games, and the resource library. **Never shared:** people, sessions, answers, audit entries, notes, and benchmarks.

IMPORTANT — BENCHMARKS NEVER MIX

Because leaderboards and team benchmarks are department-scoped, a Surveillance agent is ranked only against Surveillance, and a Pit Manager only against Pit. Never compare a figure from a Surveillance report with one from a Pit report and call it a gap — they are different populations.

2 Signing in

You sign in with the Employee ID and password your administrator handed you. There is no public sign-up, no email address to confirm, and no self-service reset.

- 1 Open **assetdrills.com** in any modern browser — desktop, tablet, or phone.
- 2 Type your **Employee ID** exactly as issued. It is not case-sensitive.
- 3 Enter your password and select **Sign in**. You land on your Dashboard automatically.

Figure 2.1 — The sign-in screen. Enter your Employee ID (for example `B-24`) and password, then select Sign in. The eye icon reveals the password as you type.

HOW THE LOGIN WORKS

Accounts have no real mailbox. The application derives a synthetic address from the Employee ID —

`{employee_id}@stellaris.local` — and authenticates against that. This is why there is no “email me a reset link”: the address does not receive mail. A department head sets a new password directly instead.

2.1 Lockout and failed attempts

IMPORTANT — ACCOUNT LOCKOUT

After **5 failed attempts within 15 minutes** the Employee ID is temporarily locked and the message reads “Account locked — too many failed attempts. Try again in 15 minutes.” Wait for the window to pass, or ask a department head. Every attempt — successful or not — is recorded, and heads can see failed-attempt counts per employee in the Audit Digest (§7.2).

2.2 Changing your own password

Once signed in, open **Change Password** from the sidebar (under *Help*). The change is immediate and needs no approval. Requirements are shown live as you type: at least 8 characters, at least one number, and both fields matching.

Figure 2.2 — Self-service password change. Available to every user from the sidebar. The checklist turns green as each requirement is met.

2.3 Being signed out

CAUSE	HOW FAST	WHAT YOU SEE
30 minutes idle	Immediately at 30:00	Returned to the login screen. Any drill in progress is recorded as abandoned.
Head forces a logout	Within about a minute	Returned to the login screen. You can sign straight back in — a forced logout ends the current session, it does not block the account.
Account deactivated	At next sign-in	“Your account has been deactivated. Contact your administrator.”

NOTE — FORCED LOGOUT VS. DEACTIVATION

These are different tools and heads should not confuse them. **Force logout** ends the session that is open right now. **Deactivate** prevents any future sign-in but does not, by itself, kick out a session already running. To remove someone immediately and permanently: deactivate, then force logout.

3 Your first login — the guided tour

The first time an agent or pit manager signs in, a five-step tour explains the essentials before the first drill. Move with Next/Back; it appears once per account.

Figure 3.1 — Step 1 of the welcome tour. The five steps are: welcome and what A.S.S.E.T. is · drill vs. practice · the 4-hour cooldown · 20 sessions per month · scoring and adaptive difficulty.

TIP

Skipped it? The sidebar's **How It Works** page repeats all of it — scoring, cooldown, and certification rules — on one screen, any time.

The drill portal

For agents and pit managers — the screens you use every shift, and the rules that decide what a session is worth.

4 Using the drill portal

The left sidebar is your map: Dashboard, Drill, Practice, Resources, and My History under *Main*; How It Works and Change Password under *Help*. Your Employee ID and **Sign out** sit at the bottom. On a phone, open it with the ☰ icon.

4.1 The Dashboard

Your home screen summarises where you stand right now: sessions completed this month, recent average score, cooldown state, per-game accuracy, recertification progress, and your rank within your own department.

Figure 4.1 — The agent Dashboard. Left: Start Drill, Practice Mode, and View History shortcuts, session counts, the score chart, and accuracy rings. Right: your ID card with strongest and weakest game, recertification progress, and the team leaderboard.

ON THE DASHBOARD

WHAT IT TELLS YOU

Sessions This Month

Completed sessions this calendar month, against the 20-session requirement.

ON THE DASHBOARD	WHAT IT TELLS YOU
Avg Score · 14 days	Your recent form. A trend line appears once you have enough sessions to draw one.
Days Left / Cooldown	Days remaining in the current month, and whether you may start a scored drill now.
Accuracy by Game	Rings showing per-game accuracy; your weakest game is called out by name.
Team Leaderboard	Your rank inside your own department. Colleagues appear by Employee ID, not by name.
Assigned Practice	Appears only when a head has given you a focus area — see §7.3.

NOTE — THE LEADERBOARD SHOWS IDS, NOT NAMES

The team leaderboard lists Employee IDs only, ranked by this month's average score, then by session count. It includes active drill-takers in your department. Deactivated colleagues drop off it immediately.

4.2 Running a drill

A drill is a **10-question, 10-minute scored session** drawn from across the games and the shared procedure pool. Faster, accurate sessions score higher — see §5.

Figure 4.2 — A live payout drill. The chip stack sits on the table layout: read the wager, work out the payout, type the dollar amount, and select Submit Answer. The progress bar and timer at the top track the ten questions and the ten-minute cap.

Two question types

Payout drills — a bet is shown on the felt and you type the dollar payout. Answers are accepted within a two-cent tolerance, so rounding never costs you a question.

Multiple choice — rules, game-protection, and procedure scenarios; pick the correct option. Options are shuffled every time the question appears.

Good to know

The tag beside each question shows Easy / Medium / Hard — difficulty adapts to you (\$5.4).

Roulette and Craps tables offer a **2D / 3D view toggle**.

Leaving early marks the session **abandoned**: it scores 0, does not count toward your 20, and asks you for an optional reason that management can read.

IMPORTANT — THE ABANDON REASON IS VISIBLE TO MANAGEMENT

When you leave a drill early the app offers a one-line reason box (“radio call, restroom break, technical issue...”). It is optional, but it is the only way to explain the abandon: the reason is attached to the session and shown to supervisors in the Audit Log. A blank reason leaves them guessing.

4.3 Your results

Finishing a session opens a full breakdown, so every miss becomes a lesson.

Figure 4.3 — The Results screen. Final score out of 150, the time multiplier that was applied, correct and missed counts, a question-by-question sequence, and accuracy broken down by game and by difficulty. Scroll down to review each missed question with the correct answer, the payout layout, and an explanation.

4.4 Practice mode

Practice is unlimited and separate from your record. Choose a single game, *Procedures*, or *Mixed — All Games*. Questions shuffle and cycle endlessly; there is no pool to exhaust and no cooldown to wait out.

IMPORTANT — EXACTLY WHAT PRACTICE RECORDS

Practice **never** affects your score, your cooldown, your adaptive difficulty, your certification count, or the question statistics management reads. It **does** leave two harmless traces — a “practice started” entry in the audit log, and a count of questions answered per game that feeds remediation credit (\$7.3). Practising is visible, and that is by design: it is evidence of effort, not a penalty.

Figure 4.4 — The Practice picker. Choose a game for endless questions in one game, or drop into a **Skill Trainer** (the gold cards) for specialised drills.

Figure 4.5 — Instant feedback. In practice every answer is graded immediately: your answer against the correct answer, plus the explanation. Select Next Question — or click anywhere — to continue.

TIP — PRACTISE WITH PURPOSE

Use the accuracy rings on your Dashboard, or ask your supervisor for the Weak Areas report, to choose what to practise. Focused practice on an assigned game also earns credit toward a Remediation assignment: every 10 questions answered in the target game counts as one credit.

4.5 Skill trainers

Beyond the games, dedicated trainers drill specific dealer skills: the **Blackjack Strategy Trainer** and **Hand Recognition Trainers** for Caribbean Stud, Ultimate Hold'em, Let It Ride, and Three Card Poker. Like practice, they are unscored.

Figure 4.6 — The Blackjack Strategy Trainer. Call the correct play (Hit / Stand / Double / Split) for the dealt hand against the dealer up-card. Keyboard shortcuts **H** **S** **D** **P** speed you up; a wrong call shows the house rule and highlights the matching row of the strategy chart, which is one click away in full.

4.6 Resources

Reference material lives here: rules and payout PDFs, video walkthroughs, a payout calculator, and the trainers — organised by game. Resources are shared across both departments.

Figure 4.7 — The Resources library. Each game card links to its Rules, Videos, Calculator, and — where available — Trainer tabs.

4.7 My History

A running log of your sessions with date, status, score, accuracy, and time. Monthly progress, best score, and average sit at the top. Select any row to reopen that session's full Results breakdown.

Figure 4.8 — Session History. Abandoned sessions are listed too, marked as such and scored 0 — the record is complete, not flattering.

4.8 Pit Operations

Pit managers use exactly the same portal — same drills, scoring, cooldown, certification, and trainers. The only differences are cosmetic and jurisdictional: the sidebar is labelled **Pit Operations**, and the leaderboard, benchmark, and every report are scoped to Pit staff.

Figure 4.9 — A Pit Manager's Dashboard. Identical layout to the agent view; note “PIT OPERATIONS” in the sidebar and the Pit-only leaderboard on the right.

5 Scoring & certification

A small number of rules govern every scored drill. They are stated here exactly as the application applies them — this section is the reference both agents and management should quote.

5.1 Scoring

THE SCORING FORMULA

score = round(correct answers × 10 × time multiplier)

Multiplier: **×1.5** when the session is finished in 5 minutes or less · **×1.25** over 5 and up to 7½ minutes · **×1.0** over 7½ minutes.

The multiplier applies to the whole session at the end, not per question. Maximum: **150** points (10 correct × 10 × 1.5). Abandoned or expired sessions score **0**.

FINISH TIME	MULTIPLIER	10/10	8/10	6/10
≤ 5:00	×1.5	150	120	90
5:00 – 7:30	×1.25	125	100	75
7:30 – 10:00	×1.0	100	80	60

TIP — ACCURACY BEATS SPEED

Eight correct answers in four minutes (120) beats ten correct in eight minutes (100), but six correct in four minutes (90) loses to eight correct in eight (80 — close) and badly to nine in seven (112). Rushing pays only while you stay accurate.

5.2 The 4-hour cooldown

After each *completed* session you must wait **4 hours** before starting another scored drill. It is global — there is no per-game bypass — and it is enforced on the server, so reloading, switching device, or clearing the browser will not shorten it. The Drill link in the sidebar greys out and shows a live countdown. Practice is never blocked.

HOW THE COOLDOWN IS MEASURED

From the `completed_at` timestamp of your most recent **completed** session. Abandoned sessions do not start a cooldown — if you abandon, you may start again at once. The countdown the browser shows is a cached copy of the server's answer, refreshed at least every 30 seconds.

5.3 Monthly recertification

THE CERTIFICATION RULE

Each drill-taker must complete **20 sessions per calendar month**. Only sessions with status *completed* count — abandoned and expired sessions do not. The month is the calendar month; the counter resets at midnight on the 1st. Falling short flags the account and raises an in-app notification to the department's management.

IMPORTANT — 20 SESSIONS, 4 HOURS APART

Twenty sessions at a four-hour cooldown needs planning: the theoretical ceiling is six per day, but realistically it is one or two per shift. Leaving the requirement to the last week of the month is how agents end up flagged. Management can see the required pace per agent on the Completion Tracker (§6.3).

5.4 Adaptive difficulty

Each game tracks your level independently, from 1 (Easy) to 3 (Hard).

- **Step up** — three correct answers in a row at your current level in that game.
- **Step down** — two wrong answers in a row at your current level.
- **Bounded** — never below 1, never above 3.
- **Practice never changes it** — only scored drills move your level.

NOTE — DIFFICULTY DOES NOT CHANGE THE POINTS

A hard question is worth the same 10 points as an easy one. Difficulty controls what you are *asked*, not what a correct answer is worth. This is deliberate: it keeps scores comparable across agents. It also means a strong agent working at level 3 and a new agent at level 1 can post the same score — read scores alongside the difficulty breakdown on the Results screen, not alone.

5.5 How the ten questions are chosen

A session is not a random ten. The draw is designed to stay varied, to lean gently toward your weaker games, and never to serve the same near-identical question twice.

THE SESSION DRAW, IN ORDER OF PRIORITY

1. **Freshness** — questions you answered in your last 3 completed sessions are excluded.
 2. **Spread** — at most 4 of the 10 questions from any one game; shared procedure questions form their own bucket, also capped at 4. Every session therefore touches at least three different buckets.
 3. **Procedure variety** — at most 2 procedure questions from the same category (e.g. `roulette_procedure`).
 4. **No near-duplicates** — never two payout questions with the same game and payout ratio, and never two questions with identical wording.
 5. **Weak-area lean** — a game's weight is $0.5 + 0.5 \times (1 - \text{accuracy})$, so a 20 %-accuracy game is about 1.5× as likely as an 80 % one. Weak areas surface more; they do not take over.
- Fallback** — if the fresh pool cannot fill ten, the rules relax in that order (recently-seen questions first, caps last). A full ten-question session always wins over an under-filled one.

IMPORTANT — CRAPS IS PRACTICE-ONLY

Craps questions never appear in a scored drill. The Craps game is flagged practice-only in production, so its 74 active questions are available in Practice (including Mixed) but excluded from scored sessions. This is deliberate — the team drills Craps freely until everyone is ready for it to count. Promoting it later is a single database change and needs no application update. Note that Craps procedure questions, which are shared procedure questions rather than Craps-game questions, *do* appear in scored drills.

5.6 Abandoned sessions

IMPORTANT

Leaving a drill before finishing — closing the tab, navigating away, being timed out at 30 minutes idle, or letting the 10-minute cap expire — records the session as **abandoned**. It scores 0, does not count toward the 20, and is visible to management with its reason. Finish the session: a low score always beats an abandon.

5.7 The live question pool

Sessions draw from the active pool at the moment a session starts. At the time of writing:

POOL	ACTIVE QUESTIONS	IN SCORED DRILLS?	NOTES
Blackjack	178	Yes	Multiple choice: payouts, side bets, game protection, basic strategy.
Procedures (shared)	165	Yes	Floor procedures incl. roulette, craps, and CSP procedure sets. Eligible in every session.
Let It Ride	92	Yes	28 further questions exist but are deactivated.
Caribbean Stud Poker	78	Yes	Ante/Bet payouts plus progressive and qualify rules.
Craps	74	Practice only	Excluded from scored sessions by the practice-only flag.
Three Card Poker	45	Yes	Pair Plus payout drills.
Roulette	31	Yes	Payout scenarios are generated fresh on the table layout each time, so the same question is never numerically identical twice.
Ultimate Texas Hold'em	30	Yes	At the 30-question minimum — watch this pool.

Counts are active questions at the time of writing and move as questions are added or retired. Read them live in *Question Stats* (\$6.5).

Management

Every management screen, every number defined, and the routines that turn them into action. If a figure in this part ever disagrees with the application, the application is right and this manual needs an update — tell your administrator.

6 The management portal

Supervisors, shift managers, and department heads sign in the same way as everyone else and land in the management portal instead of a dashboard. Every view is scoped to your department, every list can be filtered, and every page exports to Excel.

THE MANAGEMENT SIDEBAR

GROUP	PAGE	WHO SEES IT
Main	Team Dashboard · Completion Tracker · Weak Areas	All management roles
Reports	Question Stats · Question Editor · Audit Log	All management roles
Reports	Scorecard · Audit Digest	Department heads only
Admin	Remediation · User Management	Department heads only

NOTE — THE TWO HEADS

“Department head” means the **Director** on the Surveillance side and the **Casino Manager** on the Pit side. Supervisors and shift managers do not see the Admin group at all — the links are absent, and the pages refuse the request even if the address is typed by hand.

6.1 Team Dashboard

The command centre: department averages, who is behind on sessions, score-decay alerts, and a searchable roster where every row opens that person's detail page.

Figure 6.1 — Team Dashboard. The amber banner lists everyone below the 20-session monthly target; the purple banner lists score decay. Each roster row links to Agent Detail; *Export Excel* is top-right. In this demonstration capture all nine agents are below target, which is why On Track reads 0/9.

ELEMENT	EXACTLY WHAT IT COUNTS
Total Agents	Every drill-taker account in your department, including deactivated ones . The Status column tells you which are active.
Team Avg Score	The average of each drill-taker's current-month average score, across the roster. It is an average of averages, not a session-weighted mean; an agent with two sessions counts as much as one with twenty.
On Track	How many have already completed 20 or more sessions this calendar month.
Sessions column	Completed sessions this calendar month, out of 20.
Avg Score column	That person's average score for this calendar month only — blank until they complete a session this month.
Last Active	The timestamp of their most recent session.
Decay chip	Appears beside the name when the two-week comparison in §6.8 finds a drop of 15 % or more.

IMPORTANT — TWO THINGS THIS SCREEN DOES NOT SPELL OUT

1. **“Avg Score” is this month, not all time.** On the 1st of a month the column empties out and the team average drops to the first few sessions posted. That is expected behaviour, not lost data — history is intact on Agent Detail and in the Scorecard.
2. **Deactivated accounts still appear here.** The roster is every drill-taker account in the department; a leaver stays on the list — showing 0 sessions and counting toward “below target” — until the account is deleted. Read the Status column before you act on a banner, and see §8.5 for the offboarding routine.

6.2 Agent Detail

One person, in full: score trend, per-game averages, and the complete session history including the IP address and device recorded for each sitting.

Figure 6.2 — Agent Detail. The complete performance picture for one team member, and the page to have open during a coaching conversation.

TIP — WHAT THE IP AND DEVICE COLUMN IS FOR

Session records carry the IP address and browser user-agent. Its purpose is integrity, not surveillance of staff: it is how you check that a run of suspiciously fast, high-scoring sessions came from the surveillance room rather than from one person completing drills on a colleague's behalf. Treat it as evidence to confirm or clear a concern, and see §12 for the handling rules.

6.3 Completion Tracker

Certification at a glance: who has hit 20 sessions this month and who has not, at what pace they now need to work, and the exceptions you have recorded.

Figure 6.3 — The Completion Tracker enforces the 20-session rule across the department. Rows are sorted by urgency, the **prev** tag marks anyone who also missed last month, and the Needed column gives both the shortfall and the sessions-per-day pace required to close it.

THE FOUR STATUSES

STATUS	RULE	HOW TO READ IT
On Track	20 or more sessions completed this month	Certified for the month. Nothing more is required.
Below Target	Short of 20, and the remaining shortfall needs 1.5 sessions per day or fewer	Behind but recoverable at a normal pace.
At Risk	Short of 20, and the shortfall needs more than 1.5 sessions per day	Will not make it without a deliberate push. This is the group to speak to.
Flagged	Short of 20 on the last day of the month	The month is over; the shortfall is now a compliance fact. Record a note if there is a reason.

HOW THE PACE IS CALCULATED

needed = 20 – completed sessions this month

per day = needed ÷ days left in the month, where days left = (last day of month – today). On the final day, days left is 0 and anyone short becomes *Flagged*.

The *At Risk* threshold is $\text{needed} \div \text{days left} > 1.5$. Remember the four-hour cooldown caps a realistic day at two or three sessions.

RECERT EXCEPTION NOTES

Use **Add note** on any row to record why a month fell short — approved leave, medical absence, a mid-month transfer. Notes are per agent per month, up to 1000 characters, editable and deletable, and previous months are kept in the row's history. They appear in both Completion exports, so the explanation travels with the number.

IMPORTANT — A NOTE EXPLAINS, IT DOES NOT EXCUSE

Writing a note does not change the status, the count, or the flag. It attaches the reason to the record so that a report reviewed months later is not read as unexplained non-compliance. Write the note in the month it applies to.

TWO EXPORTS, DIFFERENT JOBS

BUTTON	CONTENTS
Export Excel	One sheet — the tracker as displayed: ID, name, sessions this month, required, status, last month's sessions, whether last month was missed, and the note.
Compliance Records	Two sheets — <i>Summary</i> (as above plus a Compliant yes/no column) and <i>Session Detail</i> , every completed session this month with date, time, score, and duration. This is the file to hand over when someone asks for training evidence.

6.4 Weak Areas

Where the department struggles: accuracy by game, the most-failed questions, and per-agent weakest areas — filterable by date range, agent, and game.

Figure 6.4 — Weak Areas. Use it to steer coaching and to decide what to assign as Remediation. Bars are colour-coded: red below 60 %, amber 60–75 %, green above 75 %.

WHAT WEAK AREAS COUNTS

Answers from **completed sessions only**, in your department, within the selected date range — *last 30 days, 90 days, 6 months, or all time*. The default is **90 days**. Practice answers are never included. Accuracy for a game is $\frac{\text{correct answers}}{\text{answers shown}}$ for that game, not an average of per-agent rates.

TIP — READ THE PAIR, NOT THE NUMBER

A game at 55 % accuracy over 400 answers is a training problem. The same 55 % over 9 answers is noise. Always read accuracy next to the volume beside it before you assign remediation on the strength of it.

6.5 Question Stats

How each question is performing for *your* department: how often it has been shown, how often it was answered correctly, and whether it looks too easy or too hard.

Figure 6.5 — Question effectiveness. Filter by game, difficulty, and status (Active / Inactive / Never shown), search the text, and sort any column. The four tiles summarise active questions, average accuracy, flagged questions, and questions never yet shown.

DEPARTMENT-SCOPED COUNTS

Shown and **Correct** are recomputed from your department's answers every time the page loads — Surveillance sees Surveillance's experience of a question, Pit sees Pit's, over the same shared pool. The numbers therefore differ between Henk's screen and Raquel's, and that is correct. Only scored sessions count; practice never moves these figures.

FLAG	RULE	WHAT TO DO
Too Easy	Accuracy $\geq$ 90 % after at least 10 showings	Not automatically a problem — it may simply be well-trained. Consider raising its difficulty or retiring it if it is trivial.

FIELD	RULES THAT MATTER
Type	<i>Multiple choice or payout.</i> A payout-drill game can hold both — the interface renders by question type, not by the game's type.
Correct answer (payout)	Store the payout ratio, not a dollar amount. 35 for 35:1, 1.5 for 3:2, 1.8 for 9:5. The drill computes bet × ratio and accepts the agent's typed amount within two cents. A dollar figure in this box makes the question permanently unanswerable.
Correct answer (choice)	Must match one of the options exactly. Options are shuffled at display time.
Explanation	Shown after a wrong answer in both drills and practice. This is where the training actually happens — write the rule, not just the number.
Category	Drives which felt band the table layout highlights for payout questions, and the per-category caps in the session draw. Use an existing category unless you have a reason not to.
Difficulty	1 Easy · 2 Medium · 3 Hard. Feeds the adaptive engine. Points stay at 10 regardless.
Active	Unticking removes a question from all future draws while preserving its history. This is the correct way to retire a question — there is no delete.

TIP — TEST WHAT YOU WRITE

After saving a payout question, open Practice for that game and answer it once. Two minutes of checking prevents a bad ratio quietly costing every agent a point for weeks.

6.7 Audit Log

An append-only record of what happened, with filters for date range (24 hours to all time), employee, and action category, plus free-text search. Drill-takers have no access to it whatsoever.

Figure 6.7 — The Audit Log. Filterable, searchable, and exportable. Abandon reasons appear as a chip on the row — select it to read the agent's full explanation.

IMPORTANT — WHAT THIS PAGE DOES AND DOES NOT SHOW

This page lists your department's drill-takers only — agents on the Surveillance side, pit managers on the Pit side.

Actions performed by management — question created/updated/toggled, users created, deactivated, deleted, password reset, forced logout, remediation assigned or closed — *are* recorded permanently, but they are attributed to the manager who performed them, and managers are not drill-takers, so they do not appear in this list. Read them in the **Audit Digest** (§7.2), which counts every role in the department. The consequence worth remembering: the “Question edits” filter on this page will normally return nothing.

CATEGORY FILTER	EVENTS
Auth events	Login · Logout · Password change (self-service)
Sessions	Drill started · Drill completed (with score and correct count) · Drill abandoned (with the agent's reason)
Practice	Practice started, with the scope chosen and the size of the pool
Question edits	Question created / updated / activated / deactivated — recorded, but see the correction above

IMPORTANT — THE 500-ROW CAP

The page loads the **most recent 500 entries** that match your date filter, newest first, and the Excel export contains what is on screen. For counting rather than reading — “how many logins last week?”, “how many abandons?” — use the Audit Digest, which totals every row in the period regardless of the cap. Narrow the date range if you need to read older detail.

6.8 Notifications

The sidebar bell collects the two alerts that need a manager's attention: drill-takers who missed last month's target, and drill-takers whose scores are decaying.

Figure 6.8 — The Notifications panel. Grouped into Missed Target and Score Decay. Dismiss individually or clear all; the badge shows the outstanding count.

HOW THE TWO ALERTS ARE GENERATED

Missed Target — every *active* drill-taker in your department who completed fewer than 20 sessions in the **previous** calendar month. The alert key includes the month, so it clears itself when the next month begins.

Score Decay — compares the average score of the last 14 days against the 14 days before that. It fires when the drop is **15 % or more**, and only when there are at least **3 completed sessions in each window** — so a quiet fortnight cannot fake a decay, and a genuinely inactive agent shows up as Missed Target instead. A dismissed decay alert returns after a week if the decline continues.

IMPORTANT — DISMISSALS ARE PERSONAL

Dismissing a notification stores that choice **in your own browser**. It does not clear the alert for your colleague, and it comes back if you sign in from a different computer or clear your browser data. Treat the bell as your own worklist, not a shared queue — if an alert needs joint action, agree it in person or in Remediation (§7.3), which is stored on the server.

NOTE — THE PANEL REFRESHES EVERY FIVE MINUTES

Notification data is cached for five minutes so that moving between management pages does not re-query the database each time. A change you make now may take up to five minutes — or one reload — to be reflected in the badge.

7 Department head tools

Four pages are reserved for the Director (Surveillance) and the Casino Manager (Pit): two reports that summarise a department, and two tools that act on it. Everything on them respects the same department wall as the rest of the portal.

7.1 Scorecard

Month-over-month department KPIs — average score, sessions, active drill-takers, recertification compliance, and accuracy — with delta arrows, sparklines, a monthly detail table, and a per-game accuracy matrix. Six months are shown.

Figure 7.1 — The Department Scorecard. The current month is marked **MTD** — month to date — and every delta compares it with the full previous month. Months with no activity are shown as zero rather than omitted, so the trend line stays continuous.

KPI	DEFINITION
Avg Score	The mean score of every completed session in the department that month. Unlike the Team Dashboard tile, this is session-weighted: a heavy driller moves it more than a light one.
Sessions	Completed sessions in the department that month. Abandoned sessions are excluded everywhere on this page.
Active	Distinct drill-takers with at least one completed session that month — participation, not headcount.
Recert Rate	The percentage of the roster that reached 20 completed sessions that month.
Accuracy	Correct answers ÷ answers given, across all completed sessions that month.

KPI	DEFINITION
Per-game matrix	The same accuracy calculation split by game, one column per month. A dot means no answers were recorded for that game that month.

IMPORTANT — HOW TO READ THE RECERT RATE HONESTLY

The denominator is **today's active roster**, applied to every month in the table. If the department had 6 drill-takers in March and has 10 now, March's rate is shown as "out of 10". This keeps the trend line comparable against the team you manage today, but it means a historic percentage in this table is not the percentage that was true at the time.

For a point-in-time figure — the number to quote in a compliance conversation about a specific month — use the Completion Tracker's *Compliance Records* export taken during that month, or count the Session Detail sheet.

TIP — THE CURRENT MONTH ALWAYS LOOKS BAD

MTD is an incomplete month compared against a complete one. On the 8th, sessions will be down roughly two-thirds and the recert rate will usually be 0 %, because almost nobody has 20 sessions yet. Judge the month on avg score and accuracy, which are rate-based and comparable, and leave volume judgements until the month closes.

7.2 Audit Digest

A period rollup of everything your department did — totals by action, the most active users, security-relevant events, and failed sign-ins — over 24 hours, 7, 30, or 90 days.

Figure 7.2 — The Audit Digest. A fast health check on activity and security. Exact counts, unaffected by the Audit Log's 500-row display cap.

PANEL	WHAT IT CONTAINS
Totals by action	Every recorded action in the period, counted exactly: logins, logouts, self-service password changes, practice starts, drills started / completed / abandoned, question edits, user administration, and remediation events. This is where management's own actions appear.
Most active users	The top 15 by event count, across all roles in your department.
Notable events	The security-relevant subset: abandoned drills, user created / deleted / deactivated / reactivated, admin password resets, forced logouts, and remediation assigned / completed / cancelled.
Failed sign-ins	Failed attempts grouped by employee, with the last attempt time, matched to your department's roster.

NOTE — FAILED ATTEMPTS AGAINST UNKNOWN IDS

The failed-login panel can only show attempts against Employee IDs that belong to your department. An attempt against an ID that does not exist — a typo, or someone guessing — cannot be attributed to a department and is therefore not listed. It is still recorded. If you suspect probing from outside, raise it with the platform administrator, who can query the raw attempt log.

TIP — A TWO-MINUTE WEEKLY SECURITY READ

Set the period to 7 days and look at three things: forced logouts and admin password resets you did not perform, any employee with a double-digit failed-login count, and the ratio of drills abandoned to drills completed. Anything unexpected in those three lines deserves a question.

7.3 Remediation

Assign a drill-taker a focus — one game, or Procedures — with an optional note and due date. The assignment appears on that person's Dashboard as an **Assigned Practice** card with a Practice button that deep-links to the right game and a Start Drill button. Progress is tracked automatically.

Figure 7.3 — Remediation assignments with live progress. Each row shows the drills-plus-practice split; the assign form pre-suggests the agent's weakest game from the last 90 days.

HOW AN ASSIGNMENT COMPLETES

progress = qualifying drills + practice credits, counted from the moment the assignment was created.

Qualifying drill — a completed session that included at least one question from the target game. For a Procedures focus, any completed session qualifies.

Practice credit — one credit per **10 questions** answered in focused practice on the target game (or Procedures practice for a Procedures focus).

Auto-completion — when `progress ≥ target` and at least **one real drill** has happened. This drill floor means practice alone can never certify a remediation; assessment integrity is preserved.

Target — default 3, settable 1–50. **Overdue** is displayed when the due date has passed and the assignment is still open; it does not close or escalate anything.

STATUS	MEANING
Assigned	Open and counting. Visible on the agent's Dashboard.
Overdue	Open, and past its due date. A display state — still counting.
Completed	Reached the target with at least one drill, or a head marked it complete by hand.
Cancelled	Closed by a head without completion. Use this when circumstances change; it stays in the record.

TIP — WRITE THE NOTE AS IF YOU WILL NOT BE THERE

The note is the only context the agent gets. “Roulette split payouts — you missed three in the last two sessions; work through the practice set before Friday” lands. “Needs improvement” does not. Assignments, completions, and cancellations are all recorded in the audit trail, so a well-written note also documents that coaching took place.

7.4 User Management

Heads manage their own department's accounts end to end — no ticket to the platform administrator required. Six actions are available, all department-walled, all recorded.

Figure 7.4 — User Management. Per-user actions: reset password, force logout, deactivate or reactivate, and — only for accounts with no session history — permanent delete.

Figure 7.5 — Creating a user. Employee ID, full name, password (minimum 8 characters), and role. The login address is derived automatically as `{employee_id}@stellaris.local`; hand the credentials over in person.

ACTION	WHAT IT DOES	RECORDED AS
Create user	Adds an account in your department with a role you are allowed to assign. The Director may create <i>agent</i> and <i>supervisor</i> ; the Casino Manager may create <i>pit manager</i> and <i>shift manager</i> .	USER_CREATED
Reset password	Sets a new password directly, minimum 8 characters. There is no email link — hand it over in person. The password itself is never recorded.	USER_PASSWORD_RESET
Force logout	Ends the user's <i>current</i> session within about a minute. It does not prevent them signing back in.	USER_FORCE_LOGOUT
Deactivate	The reversible block. The account cannot sign in; all sessions, answers, notes, and audit history are preserved.	USER_DEACTIVATED
Reactivate	Restores access with everything intact.	USER_REACTIVATED
Delete permanently	Removes the account entirely. Offered only when the user has never completed a session ; otherwise the app refuses and directs you to deactivate.	USER_DELETED

READ BEFORE DELETING

Permanent delete is for mistakes — a typo in an Employee ID, an account created twice, a hire who never started. It removes the account, its difficulty tracking, **and its audit-log entries**. It cannot be undone, and there is no restore.

For anyone who has actually used the platform, **deactivate instead**. The application enforces this for you: an account with session history cannot be deleted. Training and compliance records must survive the person leaving.

GUARDRAILS THE SYSTEM ENFORCES FOR YOU

- You can only act on users in **your own department**.
- You cannot act on **yourself** — use Change Password for your own password.
- You cannot act on **the other head**, or any other account-managing role.
- Every action writes an audit entry naming you as the actor. Passwords are never written to it.
- Only the platform administrator can create or alter the heads themselves.

IMPORTANT — DEACTIVATION DOES NOT END A LIVE SESSION

A deactivated user who is *already signed in* keeps working until their session expires or they are forced out. To remove someone immediately: **deactivate first, then force logout**. In that order the account is blocked before the session is dropped, so they cannot simply sign in again.

8 Management playbooks

The screens are only half the system; the routine is the other half. These are the rounds worth running, in the order that makes them quick.

8.1 The daily five minutes

- 1 **Bell first.** Open Notifications. Anything under Score Decay is a coaching conversation this week, not next month.
- 2 **Team Dashboard.** Scan the banners and the Last Active column. Someone who has not drilled in ten days is the earliest signal you get.
- 3 **Act on one thing.** One conversation, or one remediation assignment. A daily habit of one beats a monthly panic of ten.

8.2 The weekly review

- 1 **Completion Tracker.** Everyone in *At Risk* gets told the number they need per day. The column already calculates it.
- 2 **Weak Areas, last 30 days.** Note the two lowest games with meaningful volume. If the same game is lowest three weeks running, it is a training gap, not an agent problem.
- 3 **Audit Digest, 7 days** (heads). The two-minute security read in §7.2.
- 4 **Remediation.** Close what is done, chase what is overdue, cancel what circumstances overtook.

8.3 Month-end certification close-out

- 1 **Three days out** — Completion Tracker. Anyone who still needs more than two per day will not make it; decide now whether that is a push or a documented exception.
- 2 **Last working day** — add recert notes for every legitimate shortfall (leave, illness, transfer, injury). Write them in the month they belong to.
- 3 **Last working day** — export **Compliance Records**. This is the point-in-time evidence file; store it wherever your department keeps training records.
- 4 **First days of the new month** — the bell raises Missed Target for anyone who fell short. Work that list; the alerts clear themselves when the next month begins.
- 5 **Heads** — open the Scorecard once the month closes and read the completed month against the previous one, then export it for the file.

TIP — ONE FILE, EVERY MONTH, SAME PLACE

The Compliance Records export is the single artefact that answers “prove this team was trained”. Taken monthly and filed consistently, it turns a stressful audit request into a folder.

8.4 Onboarding a new drill-taker

- 1 **Create the account** (head, User Management): Employee ID matching your existing convention, full name, a password of at least 8 characters, and the correct role.
- 2 **Hand the credentials over in person.** There is no email delivery and no reset link.
- 3 **Watch the first sign-in.** The five-step tour runs once; it is the best two minutes of training the platform gives.
- 4 **Have them change the password** from the sidebar on that first sign-in.
- 5 **Set expectations explicitly:** 20 sessions a month, 4 hours between scored drills, finish every session you start.
- 6 **Point them at Practice** before their first scored drill, and at Resources for the rules PDFs.
- 7 **Note the mid-month join.** A person hired on the 20th cannot reach 20 sessions that month. Add a recent note on the Completion Tracker the day they start, so the shortfall is explained before it is questioned.

8.5 Offboarding

- 1 **Deactivate** the account in User Management — the reversible block that keeps all history.
- 2 **Force logout** immediately afterwards if they may still be signed in somewhere.
- 3 **Do not delete.** The application will refuse for anyone with session history, and that is the correct outcome: their training record is departmental evidence.
- 4 **Expect them on the roster.** Deactivated accounts remain on the Team Dashboard and Completion Tracker showing 0 sessions. Add a recent note — “left the department on 14 July” — so the row explains itself for the rest of the month.
- 5 **Cancel any open remediation** so it does not sit overdue forever.

8.6 Coaching a weak game

- 1 **Confirm it is real** — Weak Areas over 90 days, and check the answer volume, not just the percentage.
- 2 **Check the questions, not only the people** — Question Stats filtered to that game. A cluster of “Too Hard” flags may mean a badly worded question rather than a weak team.
- 3 **Assign remediation** with a target of 3–5 and a due date about two weeks out. The form already suggests each person's weakest game.
- 4 **Tell them what you assigned and why.** The card appears on their Dashboard, but a sentence in person is what makes it land.
- 5 **Re-read Weak Areas over 30 days** after the due date. If the game has not moved, the problem is the material — take it to a floor briefing rather than assigning again.

8.7 Keeping the question pool healthy

- 1 **Monthly** — Question Stats, sort by Shown ascending. Questions never shown are either brand new or in a practice-only game.

- 2 **Review the flags.** “Too Hard” below 40 % after 10 showings: read the question and verify the stored answer before blaming the team.
- 3 **Watch the 30-question line** per game. Ultimate Texas Hold'em sits at exactly 30 today — retiring two questions puts it under the minimum.
- 4 **Retire by deactivating**, never by rewriting a question into something different. Rewriting silently changes the meaning of every historical statistic attached to it.
- 5 **Add in small batches** and answer each new question once in Practice to prove it works.

9 Exports & reporting

Every management screen exports to Excel. Exports always reflect the filters you have applied and the department you belong to — there is no way to export another department's data.

SCREEN	FILTERS APPLIED FIRST	WHAT THE FILE CONTAINS
Team Dashboard	—	One row per drill-taker: Employee ID, name, role, active yes/no, sessions this month, average score, last session.
Agent Detail	The agent you are viewing	That person's session history and per-game performance.
Completion Tracker	—	Sessions this month, required, status, last month's count, missed-last-month flag, and the recent note.
Completion → Compliance Records	Current month	Two sheets. Summary with a Compliant column, and Session Detail — every completed session with date, time, score, and duration.
Weak Areas	Date range · agent · game	Per-game accuracy, the most-failed questions, and per-agent weakest areas as displayed.
Question Stats	Game · difficulty · status · search	Question text, game, category, difficulty, shown, correct, accuracy — department-scoped.
Audit Log	Date range · employee · action category · search	The rows on screen — remember the 500-row cap.
Scorecard head	Six months	Monthly KPI rows and the per-game accuracy matrix.
Audit Digest head	Period (24h / 7d / 30d / 90d)	Totals by action, most active users, and the failed-login summary.
Remediation head	—	Assignment, focus, progress, status, due date, and note.

IMPORTANT — EXPORTED FILES ARE UNCONTROLLED

A downloaded workbook leaves the platform's protections behind: no department wall, no role check, no audit trail. It contains named staff and their performance. Store exports in the department's restricted folder, share them only with people who could have seen the same data in the app, and do not attach them to open distribution lists. See §12.

Reference

Who can do what, what every number means, and how the platform protects the data it holds. Three sections to look things up in rather than read end to end.

10 Roles & access

Access is decided by role and confined by department. Nothing in the table below can be granted ad hoc — a capability arrives with a role change, made by a department head (for their own staff) or by the platform administrator (for the heads themselves).

CAPABILITY	AGENT / PIT MGR	SUPERVISOR / SHIFT MGR	DIRECTOR / CASINO MGR
Run scored drills	✓	—	—
Practice & skill trainers	✓	—	—
Resources library	✓	—	—
Own history & certification	✓	—	—
Change own password	✓	✓	✓
Team Dashboard & Agent Detail	—	✓	✓
Completion Tracker & recert notes	—	✓	✓
Weak Areas	—	✓	✓
Question Stats	—	✓	✓
Question Editor (create & edit)	—	✓	✓
Audit Log	—	✓	✓
Notifications (bell)	—	✓	✓
Excel exports	—	✓	✓
Scorecard	—	—	✓
Audit Digest	—	—	✓

CAPABILITY	AGENT / PIT MGR	SUPERVISOR / SHIFT MGR	DIRECTOR / CASINO MGR
Remediation	receives	—	assigns
User Management (accounts, passwords)	—	—	✓
Create or change a department head	—	—	admin only

NOTE — MANAGEMENT DOES NOT DRILL

Supervisors, shift managers, and heads have no Drill or Practice pages: their accounts are not drill-takers, they never appear on a leaderboard, and they are not subject to the 20-session requirement. A manager who wants to try the drills needs a separate drill-taker account.

IMPORTANT — EVERYTHING ABOVE IS ALSO DEPARTMENT-WALLED

Every ✓ in this table is limited to your own department. A Director sees Surveillance; a Casino Manager sees Pit. Neither can see the other's people, sessions, notes, or audit entries, and no setting in the application changes that.

11 Metric definitions

One table, every number. When two screens seem to disagree, the answer is almost always that they are measuring different windows or different populations — this is where to check.

METRIC	WHERE IT APPEARS	DEFINITION, WINDOW, AND POPULATION
Session score	Results, History, everywhere	$\text{correct} \times 10 \times \text{multiplier}$, rounded. Multiplier $\times 1.5 \leq 5$ min, $\times 1.25 \leq 7\frac{1}{2}$ min, $\times 1.0$ thereafter. Max 150. Abandoned = 0.
Sessions this month	Dashboard, Team Dashboard, Completion	Sessions with status <i>completed</i> in the current calendar month, per person. Server-side, UTC month boundary (see §14.1).
Avg score (person)	Team Dashboard, Completion	Mean score of that person's completed sessions this calendar month . Empty until they complete one.
Avg score · 14 days	Agent Dashboard	Mean score of the person's completed sessions in the last 14 days — a rolling window, not a month.
Team Avg Score	Team Dashboard tile	Mean of each roster member's monthly average — an average of averages. Every person counts equally regardless of session count.
Avg Score (Scorecard)	Scorecard	Mean of every completed session in the department that month — session-weighted. Will not match the Team Dashboard tile, by design.
Accuracy (game)	Weak Areas, Scorecard	$\frac{\text{correct answers}}{\text{answers shown}}$ for that game, from completed sessions only, within the selected window. Practice excluded.
Accuracy (question)	Question Stats	$\frac{\text{times correct}}{\text{times shown}}$, recomputed for your department only from completed sessions.
Active (Scorecard)	Scorecard	Distinct drill-takers with ≥ 1 completed session that month.
Recert rate	Scorecard	Drill-takers reaching 20 completed sessions that month $\div$ today's active roster . See the caveat in §7.1.
On Track	Team Dashboard, Completion	Completed sessions this month ≥ 20 .
At Risk	Completion	Below 20, and $(20 - \text{completed}) \div \text{days left} > 1.5$.
Flagged	Completion	Below 20 on the last day of the month.
Score decay	Notifications, Team Dashboard chip	Average of last 14 days vs. the 14 days before, drop $\geq 15\%$, requiring ≥ 3 completed sessions in <i>each</i> window.
Cooldown remaining	Sidebar, Dashboard	4 hours minus the time since the last <i>completed</i> session. Abandoned sessions do not start it. Server-authoritative.

METRIC	WHERE IT APPEARS	DEFINITION, WINDOW, AND POPULATION
Difficulty level	Drill tag, Results	Per person, per game, 1–3. +1 after 3 consecutive correct; –1 after 2 consecutive wrong. Scored drills only.
Remediation progress	Remediation, agent Dashboard	Qualifying drills + practice credits since the assignment was created. 10 focused practice questions = 1 credit. Auto-completes at target, but only with ≥ 1 real drill.
Pool health	Question Stats, Question Editor	Active questions per game; warning below 30. Procedures counted as its own pool.
Too Easy / Too Hard	Question Stats	$\geq 90\%$ / $\leq 40\%$ accuracy after at least 10 showings in your department.

12 Security, privacy & data

A training platform that holds named performance data has to be defensible. This section states what is protected, what is recorded, and what management is responsible for.

12.1 Controls in place

CONTROL	HOW IT WORKS
Authentication	Managed identity provider. Passwords are stored hashed by the auth service — no one, including the platform administrator, can read an existing password. Setting a new one is the only option.
Failed-login lockout	5 failed attempts in 15 minutes locks the Employee ID temporarily. Every attempt is recorded.
Session timeout	Automatic sign-out after 30 minutes of inactivity.
Forced logout	A head can end a live session; the signed-in browser checks for this roughly every 45 seconds and on window focus.
Row-level security	Access rules live in the database, not the interface. A user's role and department are re-derived from their signed-in identity on every query, so a hand-typed address or a modified page cannot reach another department's data.
Privileged actions	Creating accounts, resetting passwords, and deleting accounts require a privileged key that never reaches the browser. They run server-side, re-verifying that the caller is an active head acting inside their own department.
Audit log	Append-only. Drill-takers have no access at all. It records who did what and when — never passwords.
Login attempts	Held in a table with no direct read access; readable only through the department-scoped summary in the Audit Digest.
Session integrity	Options are shuffled per display, payout answers are validated against a computed value, the cooldown is enforced on the server, and every session records IP address and device.
Client storage	No performance data or credentials are kept in the browser. Only convenience state — dismissed alerts and a short-lived cooldown cache.

12.2 What is stored about a person

- **Identity** — Employee ID, name, role, active flag, last session time.
- **Sessions** — start and finish times, duration, status, score, IP address, device string, and an abandon reason where given.
- **Answers** — every question answered, what was submitted, whether it was correct, the bet shown on payout drills, and the game.
- **Practice** — a per-game count of questions answered and correct, appended when a practice run ends.

- **Audit entries** — logins, logouts, password changes, drill and practice events, question edits, account administration, remediation.
- **Notes** — recent exception notes and remediation notes written by management.
- **Login attempts** — Employee ID, outcome, and time.

12.3 Retention — a decision management owns

IMPORTANT — NOTHING IS DELETED AUTOMATICALLY

The platform has **no automatic retention or purge**. Sessions, answers, audit entries, and login attempts accumulate indefinitely, which is what you want for training evidence and what you must be deliberate about for privacy. There is no “delete my data” button, and the only removal path is the permanent delete of an account that has never run a session — which also removes that account’s audit entries.

If the resort’s records policy requires a retention limit, that is a decision to take with the platform administrator and apply deliberately. Document whatever you decide; an undocumented “keep everything forever” is a position, and it should be a chosen one.

12.4 Management’s responsibilities

- **Credentials are handed over in person.** Never send a password by chat, note, or shared document. Set it, hand it over, and have the person change it at first sign-in.
- **Exports leave the perimeter.** Treat every downloaded workbook as a confidential HR-adjacent document (§9).
- **Use the audit trail before the accusation.** IP and device data exists to confirm or clear a specific concern, not for routine monitoring of staff.
- **Offboard the same day.** Deactivate, then force logout — see §8.5.
- **Review the notable events weekly.** An admin password reset or forced logout that no head performed is the signal that matters most.
- **Keep the head accounts small.** Account powers belong to the two heads; the platform administrator creates and changes those two accounts and nobody else should hold that access.

Support

The questions people actually ask, the behaviours that surprise people, and one page you can print and pin up.

13 Frequently asked questions

13.1 For drill-takers

Q. I forgot my password.

There is no self-service reset — the login address is synthetic and cannot receive mail. Ask your supervisor or department head; a head can set a new one in seconds and hand it to you.

Q. My account is locked.

Five failed sign-ins within 15 minutes triggers a temporary lock. Wait for the window to clear, or ask a head.

Q. The Drill link is greyed out.

You are inside the 4-hour cooldown after a completed session; the countdown is on the link itself. Practice is always available and never blocked.

Q. I was signed out unexpectedly.

Either 30 minutes of inactivity, or a head ended the session. Sign back in — a forced logout does not block your account.

Q. Does practice affect my score or my ranking?

No. Practice never changes your score, cooldown, difficulty, certification count, or the question statistics. It is logged as activity and it earns credit toward an assigned remediation, but it can never harm your record.

Q. My session says “abandoned”.

It was left before the tenth question — closed, navigated away from, timed out, or past the 10-minute cap. It scores 0 and does not count toward your 20. Finish every session you start.

Q. I answered the payout right but it was marked wrong.

Payouts are checked against `bet × ratio` within two cents. Check that you read the full chip stack — mixed stacks of \$1 and \$5 chips are deliberate. If the stored answer really is wrong, tell your supervisor: they can correct the question, and Question Stats will show it failing for everybody.

Q. Why do I keep getting the same game?

You should not get more than 4 questions from one game in a session, and questions from your last three sessions are skipped. Weaker games do surface more often — that is the point — but only about 1.5× more, not four times.

Q. Why don't I see Craps in scored drills?

Craps is practice-only for now: drill it as much as you like in Practice, but its questions are held out of scored sessions until the department decides they count. Craps *procedure* questions do appear in scored drills.

Q. Why don't I see the other department?

By design. Surveillance and Pit are walled off from each other's people and results. Questions, games, and resources are shared; performance is not.

Q. Can I use my phone?

Yes — the app is fully responsive. On payout drills the keyboard opens only when you tap the amount field, so the table layout stays visible while you work out the payout.

13.2 For management

Q. The Team Dashboard says the team average is 79.4 and the Scorecard says 82. Which is right?

Both. The Team Dashboard tile averages each person's monthly average, so everyone counts equally. The Scorecard averages every session, so heavy drillers weigh more. Quote the Scorecard for department performance and the Team Dashboard for “how is each person doing”.

Q. Everyone's average went blank on the 1st. Did we lose data?

No. The Team Dashboard and Completion Tracker are current-calendar-month views and they empty at month rollover. History is intact on Agent Detail, in My History, and in the Scorecard.

Q. When exactly does the month roll over?

The certification counters are calculated on the server, which runs on UTC — **20:00 Aruba time** on the last day of the month. A session finished at 21:00 on 31 July counts toward August. Tell anyone chasing their twentieth session to be finished before 8 pm on the last day. See §14.1.

Q. Why is a person who left still on my roster?

Deactivated accounts stay on the Team Dashboard and Completion Tracker — with Status *Inactive* and 0 sessions — because their training history is retained. They drop off the leaderboard and out of notifications immediately. Add a recent note explaining the departure; see §8.5.

Q. Can I delete someone who left the department?

Not if they have ever completed a session — the platform refuses, deliberately. Deactivate instead. Permanent delete exists only for accounts created in error.

Q. An agent insists they completed a session but the count did not move.

Check three things on Agent Detail: the session status (abandoned scores 0 and does not count), the completion time against the 20:00 month boundary, and whether they are looking at a cached page — the management notification data refreshes every five minutes.

Q. Can I change the 20-session requirement, the 4-hour cooldown, or the scoring multipliers?

The 20 sessions and 4 hours are stored as configurable values and can be changed by the platform administrator — there is no screen for it. The scoring multipliers are fixed in the application; an admin settings panel is not built. Changing either affects everyone in both departments immediately, so agree it before it is changed.

Q. Why does the Question Stats accuracy differ between me and the other department's head?

Because it is department-scoped by design: the pool is shared, the experience of it is not. Your figures come only from your department's answers.

Q. Why does my Audit Log show no question edits, when I know questions were edited?

The Audit Log page lists drill-takers only. Edits made by a supervisor or head are recorded against that manager, so they appear in the **Audit Digest** totals instead. See the correction in §6.7.

Q. Someone's password was reset and I did not do it. How do I find out who?

Audit Digest → Notable events, over a period covering the date. Admin password resets, forced logouts, and account creations are all attributed to the head who performed them. Only the two heads and the platform administrator can perform them at all.

Q. How far back does the Audit Log go?

Everything is kept — but the page displays the most recent 500 matching entries. Narrow the date range to read older detail, and use the Audit Digest whenever you need counts rather than rows.

Q. Can agents see each other's scores?

Only as a leaderboard of Employee IDs with a monthly average, inside their own department. No agent can open another agent's history, answers, or detail page.

Q. Can a supervisor assign remediation?

No — Remediation is a head tool. Supervisors identify the need from Weak Areas and Agent Detail and ask the head to assign it, or coach directly.

Q. Can I tell whether people actually practise?

Yes. The Audit Digest counts practice starts for the period, the Audit Log has a Practice filter showing what each drill-taker practised, and any open remediation shows the drills-plus-practice split per person.

Q. A decay alert fired for someone whose scores look fine to me.

The rule is a 15 % or greater drop between the last 14 days and the 14 before, with at least 3 completed sessions in each window. It is often a real signal — a run of fast, sloppy sessions, or a shift change. Open Agent Detail and read the last ten sessions before deciding.

Q. I dismissed an alert and it came back / my colleague still sees it.

Dismissals are stored in your own browser, not on the server. They return on another device and after clearing browser data, and decay alerts resurface weekly while the decline continues. Coordinate through Remediation, which is stored centrally.

Q. Recert Rate on the Scorecard reads 0 % but people are drilling.

Mid-month it will: almost nobody has 20 completed sessions by the 10th. The current month is marked MTD for exactly this reason. Judge an open month on avg score and accuracy.

Q. Can I get a report for one specific past month?

The Scorecard gives the monthly KPI row for each of the last six months. For named, per-person detail of a past month, use the Compliance Records export taken during that month — which is why §8.3 makes it a monthly habit.

Q. An agent cannot sign in. What do I check, in order?

1. Is the account active? 2. Are they locked out — five failures in 15 minutes? 3. Is the Employee ID typed exactly as issued (case does not matter, stray spaces do)? 4. If all three are clear, reset the password from User Management and hand it over.

Q. How do I remove someone's access immediately?

Deactivate, then force logout — in that order. Deactivation alone blocks the next sign-in but leaves an open session running.

Q. Are there email notifications?

No. Alerts are in-app only, on the bell in the management sidebar. Email delivery is not built. Anyone who needs to know must be told; the platform will not tell them.

Q. Can agents game the system?

The obvious routes are closed: options are shuffled on every display, payout answers are computed rather than matched to text, the cooldown is enforced on the server, questions from recent sessions are excluded, abandoned sessions are logged with a reason, and every session records IP and device. The remaining risk is one person drilling on another's account — which is exactly what the IP and device column exists to check.

Q. What do I hand over when someone asks for proof of training?

The Compliance Records export from the Completion Tracker: sheet one is who was compliant, sheet two is every session with date, time, score, and duration. Add the recert notes — they are in the export — and the file explains itself.

Q. Something in the application disagrees with this manual.

The application is right — it is the system of record. Tell the platform administrator so the manual can be brought back into line.

14 Known behaviours & limits

None of the following are faults, but each has surprised somebody. They are documented here so they are read rather than discovered.

#	BEHAVIOUR	WHAT IT MEANS IN PRACTICE
14.1	The month boundary is 20:00 Aruba time	Certification counters are computed on a UTC server, so a calendar month turns over at 20:00 local on the last day. Sessions completed between 20:00 and midnight count toward the following month. Some browser-side views (last month's banner and notifications) use local midnight, so during that four-hour window the two can disagree by one session. Finish month-end sessions before 8 pm.
14.2	The Audit Log lists drill-takers only	Management's own actions are recorded but read in the Audit Digest. The "Question edits" filter on the Audit Log page will normally be empty. §6.7.
14.3	Deactivated accounts stay on the roster	They appear on the Team Dashboard and Completion Tracker with 0 sessions and count toward "below target" totals, though not in the notification bell, which lists active users only. §6.1.
14.4	Notification dismissals are per browser	Not shared between managers and not synced across devices. §6.8.
14.5	Scorecard recert rate uses today's roster	Historic months are expressed against the current headcount. §7.1.
14.6	Two different "average score" definitions	Average of averages on the Team Dashboard; session-weighted on the Scorecard. Both are correct for their purpose. §11.
14.7	Craps is excluded from scored drills	74 active questions available in Practice only, so they will always read "never shown" in Question Stats. §5.5.
14.8	The Audit Log shows 500 rows	A display and export cap, not a retention limit. Use the Digest for totals. §6.7.
14.9	Deactivation does not end a live session	Pair it with force logout. §7.4.
14.10	Permanent delete removes audit history	Only possible for accounts with no sessions, but within that limit it does erase that account's audit entries. §7.4.
14.11	No screen for thresholds	20 sessions and 4 hours are configurable in the database by the administrator; the scoring multipliers are fixed in the application.
14.12	The Shift Manager role is unused	Built and ready — Pit-side management access without account powers — but no account holds it today.
14.13	Alerts are in-app only	No email, no push. If someone must act, tell them.

Not built yet

These do not exist today. They are on the ideas list, not commitments — do not plan a process around any of them:

- email notifications for missed recertification · an admin settings panel for scoring multipliers and thresholds · difficulty-tier indicators and a points leaderboard · two-factor authentication for management accounts · shift-correlation and time-pressure analytics · video-clip drills · pre- and post-training comparison reporting.

15 Quick reference card

Every number that matters, on one page. Print it and pin it up.

QUESTIONS PER SESSION 10	SESSION TIME CAP 10 min	MAX SCORE 150
POINTS PER CORRECT 10	COOLDOWN 4 h	SESSIONS PER MONTH 20
IDLE SIGN-OUT 30 min	LOCKOUT 5 / 15 min	MIN. PASSWORD 8 ch.

SCORING

≤ 5:00	×1.5 — 150 max
5:00 – 7:30	×1.25 — 125 max
7:30 – 10:00	×1.0 — 100 max
Abandoned	0, and does not count

ADAPTIVE DIFFICULTY

Step up	3 correct in a row (per game)
Step down	2 wrong in a row
Range	1 Easy → 3 Hard
Practice	Never changes it

SESSION DRAW

Freshness	Skips your last 3 sessions' questions
Per game	Max 4 of 10
Procedures	Max 4 of 10; max 2 per category
Weak-area lean	≈1.5× toward weaker games

MANAGEMENT THRESHOLDS

On Track	≥ 20 sessions this month
At Risk	Needs > 1.5 sessions/day to finish
Flagged	Short on the last day of the month
Score decay	≥15 % drop, 14 vs 14 days, ≥3 sessions each
Pool health	Warns below 30 active questions per game
Too Easy	≥90 % after 10 showings
Too Hard	≤40 % after 10 showings
Audit Log	Newest 500 rows displayed
Remediation	Target default 3 · 10 practice Qs = 1 credit · needs ≥1 drill
Month boundary	20:00 Aruba time on the last day

WHO TO ASK

SUBJECT	WHO HANDLES IT
Forgotten password, logout	Your department head — Director (Surveillance) or Casino Manager (Pit)
New account, deactivation, role change	Your department head
A wrong or unclear question	Any supervisor or head, via the Question Editor
Head accounts, thresholds, database changes	The platform administrator
This manual is out of date	The platform administrator — the application is authoritative

A.S.S.E.T. — Aruba Surveillance Skill Enhancement & Training. Internal training platform for the Surveillance and Pit departments, Aruba Marriott Resort & Stellaris Casino. User Manual & Management Guide · Version 1.0 · July 2026. Screenshots use demonstration data; live screens show your real team. For account help, contact your department head. Where this document and the application disagree, the application is authoritative — report the difference so the manual can be brought back into line.
